I agree.

Seems like we have the bulk of the plans in place, know the labs & required procedures and should be able to be in the field in short order...

I strongly support the idea, Kristine.

And I would not mind pulling some more sediment samples at the same time so we could do a proper comparison (of tissue & sediment) at paired locations of interest.

BTW I have found some very interesting Aroclor/congener spatial relationships (in sediment & tissue respectively) that justifies some additional paired sampling.

Best

Fred

I was. I think HQ is going to ask LWG to do it, but I'm not so hopeful that it would be done or done in time. If you used the same sampling plan and QAPP as GSI used in 2012, it would result in usable data.

Kristine

I appreciate your point.

If you are serious, I think I can get a 2015 Fish Tissue round...

Let me know...

Best

Fred
